

IKURA

WHITEPAPER

IKURA WHITEPAPER

Updated October 2021

WHAT IS IKURA?

Ikura is the ultimate DEX aggregation analytics service for the Harmony ecosystem. The Ikura platform allows investors of any sort to identify trends and understand the optimum moments when to buy or sell to maximise their returns. The platform enables simultaneous analysis of multiple DEXs providing real time data to support and execute educated trading decisions.

WHAT IS A DEX?

A DEX is a Decentralised Exchange that allows non-custodial trading of cryptocurrencies and tokens without the need for permission. DEX users do not have to reveal personal information, relinquish their private keys, or give up control of their assets to trade, unlike users on centralised exchanges like Coinbase, Binance, Kraken etc. While centralised exchanges use conventional order books (based on the bid-ask spread) to value trades, DEXs use an Automated Market Maker (AMM) that values trades using an algorithm.

Ikura is a DEX aggregation service that allows anyone to find a token within the Harmony blockchain and ensure that the user can make informed decisions with accurate, transparent and real time data. Ikura provides a simple, fast and easy solution to identify opportunities across all the major DEXs on Harmony.

THE BLOCKCHAIN TRILEMMA

WHAT IS THE HARMONY BLOCKCHAIN?

Launched as part of the initial exchange offering (IEO) on the Binance Launchpad in May 2019, Harmony (ONE) is a decentralised blockchain platform designed as a bridge between scalability and decentralisation efforts. Harmony (ONE) is a 3rd generation, EVM compatible chain that benefits from 2-second transaction finality and gas fees that are 1/10,000TH of a cent. Harmony solves the blockchain trilemma by ensuring that decentralisation, scalability and security is not compromised. This is achieved by having a fully scalable architecture and networking infrastructure, secure random sharding, efficient and fast consensus and finally asynchronous cross-shard transactions.

WHAT IS AN AMM?

An automated market maker (AMM) is the underlying protocol that powers all decentralised exchanges (DEXs). Simply put, they are autonomous trading mechanisms that eliminate the need for centralised exchanges and related market-making techniques.

The primary benefit of an AMM system is that it ensures that liquidity is always available for otherwise illiquid markets if enough individuals are willing to participate in a liquidity pool.

TOKENOMICS

The tokenomics have been structured to support growth and expansion. It is important for every individual reading this to understand our objectives, functionality and allocation policy to sustain our vision and plans.

Total Supply: 15,000,000 IKURA

Public: 10,000,000 IKURA

Treasury: 5,000,000 IKURA

- Dev Team - 2,000,000 IKURA
- Marketing Team - 2,000,000 IKURA
- Liquidity Support - 1,000,000 IKURA

WHY IS IKURA DIFFERENT?

- 1.** Ikura is the only platform that allows you to analyse and trade multiple decentralised exchanges (DEXs) from one simple to use application.
- 2.** Our team are early adopters of cryptocurrency with a plethora of experience within the space. The team can navigate Ikura to be a market leader. Ikura will be the ultimate tool to evaluate and trade tokens. Our technology is built in a way that enables us to expand beyond the Harmony blockchain and deploy our tool cross chain on top platforms such as Cardano, Solana, Terra and more.
- 3.** Our goal is to become the unified solution of all decentralised exchanges. Our future goal is to encode thousands of DEXs into our database and become the primary DEX search engine that helps you find the crucial information you need to make informed trading decisions.
- 4.** Early adoption and first mover advantage will be key to the growth of Ikura and we are positioning ourselves to be a market leader.
- 5.** Our future is multichain and we will carry over our holders to the other chains. By fulfilling the Ikura holding requirements, you will be able to obtain the premium services on other chains.

ROADMAP

PHASE 1 - LAUNCH (Q4 2021)

- CoinGecko Listing
- Nomics Listing
- Functioning Beta Release
- Multiple DEX Integrations
- Scalable Infrastructure
- Security and Service Hardening

PHASE 2 - GROWTH (Q1 2022)

- CoinMarketCap Listing
- Centralised Exchange Listing
- Smart Swap
- Liquidity Locker

PHASE 3 - EXPANSION (Q2 2022)

- Cross-Chain Analytics
- Website Redesign
- Token Factory
- Partnerships
